- Abuur qorshe cutub marka hore **Unit Plans**.
- Markaad abuureyso qorshe cashar, xulo cutubka liiska **Unit**.
- Markaad gudbiso dib u eegista, macnaha guud ee cutubka (magaca iyo ujeedooyinka) ayaa loo diraa AI-ga.

Tan waxay ka caawisaa AI-ga inuu ku buundeevo qorshahaaga isagoo fahamsan manhajka guud.

GUDBINTA DIB U EEGISTA AI

- Ka dib markaad buuxiso dhamaan xilliyada, guji **Submit for Review**.
- Nidaamku wuxuu u diraa qorshahaaga iyo macnaha cutubka (haddii la xulay) edge function-ka AI.
- Sug dib u eegista (caadi ahaan 10-30 ilbiriqsi).

BUUNDOOYINKA DIB U EEGISTA AI

AI-ga wuxuu qiimeeyaa qorshahaaga 10 qaybood:

QAYBTA	WAXAY QIYAASTAA
Learning Objectives	Caddaynta, gaar ahaanta, qiyaasanka
Lesson Structure	Qulqulka, wakhtiga, isku xirka
Student Engagement	Barashada firfircoon, fursadaha ka qayb galka
Teaching Strategies	Kala duwanaanshaha, habboonaanta

QAYBTA

WAXAY QIYAASTAA

Differentiation	La qabsiga ardayda kala duwan
Assessment Methods	Sida barashada loo hubiyo
Curriculum Alignment	Isku habboonaanta heerarka
Classroom Management	Anshaxa, maamulka wakhtiga
Resources Materials	Habboonaanta, helitaanka
Overall Quality	Qiimeyn guud

Qayb kastaa waxay heshaa buundo (0-100) iyo sharaxaad.

HEERARKA

BOQQOLLEYDA	HEER
90-100	Aad u fiican
80-89	Wanaagsan
70-79	Fican
60-69	U Baahan Hagaajin
0-59	U Baahan Dib u Qorid

DIB U EEGISTA KORMEERAHA

Ka dib dib u eegista AI, qorshuhu wuxuu u tagayaa kormeerahaaga:

- Kormeeruhu wuxuu arkaa buundooyinka AI iyo soo koobista.

2. Wuxuu ku darayaa faallooyinkiisa.
3. Wuxuu ansixinayaa ama codsanayaa dib u hagaajin.
4. Haddii dib u hagaajin la codsado, waad tafatirtaa oo dib u gudbisaa.

XAQIIJIN

- Heerka qorshuhu wuu isbeddelaa: **draft** → **submitted** → **in_review** → **approved** / **rejected**
- Haddii qorshaha casharku ku xirmaado cutub, AI-ga wuxuu ku buundeevaa isagoo tixgelinaya ujeedooyinka cutubka
- Kormeeruhu wuxuu arki karaa cutubka uu qorshuhu ka tirsan yahay
- Buundooyinka AI waxay ku muugdaan qorshaha
- Kormeerayaashu waxay arkaan qorshayaasha sugaya safkooda

CILLAD SAARISTA

Dhibaato: Dib u eegista AI way fashilantay. **Xal:** Hubi in dhamaan xilliyadu leeyihiin mawduuc iyo hawlo. AI-ga wuxuu u baahan yahay wax uu ku qiimeeyo.

Dhibaato: Ma gudbin karo dib u eegista. **Xal:** Hubi in qorshuhu leeyahay ugu yaraan hal xilli oo nuxur leh.

Dhibaato: Buundooyinku hooseeyaan. **Xal:** Akhri talooyinka AI-ga ee hagaajinta. Diyaari ujeedooyin cad, hawlo kala duwan, iyo habab qiimeyn oo wanaagsan.

—# Qaabka Dhismaha

Sababta nidaamka loo dhisay sidaan, iyo sida qaybuhu isugu xirmaan.

DHIBAATADA

Dugsiyadu waxay u baahan yihiin nidaam dhammaystiran oo maamula ardayda, macallimiinta, imtixaannada, iyo warbixinnada. Xalalka jira ayaa aad u adag (enterprise SaaS) ama aad u fudud (spreadsheets). Dugsiyada MBK International waxay u baahan yihiin nidaam dhexdhexaad ah: web app u shaqeeya hawsha dugsiyeed oo dhan isagoo fudud oo ay isticmaali karaan shaqaalaha aan farsamada aheyn.

HABKA

FRONTEND: REACT + VITE + TAILWIND

Sababta React: Component-based UI waxay ku habboon tahay qaabka dashboard-ka — door kastaa wuxuu leeyahay aragtiyo kala duwan, laakiin waxay wadaagaan qaybo UI oo caadi ah (tables, forms, modals). Qaabka React-ka ee ka kooban yahay ayaa tan ka dhigaya mid dabiici ah.

Sababta Vite: Server-ka horumarineed ee degdega ah, hal fayl oo HTML ah oo la soo saaro. Hal fayl oo HTML ah ayaa laga dhigi karaa meel kasta — xitaa server faylal ah.

Sababta Tailwind CSS: Utility-first CSS waxay baabi'isaa baahida nidaam qaabayn gaar ah. Mawduucyada (Acanthus, Baroque, Aurora) waxay isticmaalaan CSS custom properties.

BACKEND: SUPABASE

Sababta Supabase: Waxay siisaa PostgreSQL, authentication, row-level security, iyo edge functions hal meel. Dugsiyada:

- **PostgreSQL:** Qaabka xogta relational wuxuu ku habboon yahay students → exams → reports
- **Auth:** Email/password login leh maamulka session-ka
- **RLS:** Macallimiintu waxay arkaan fasalladooda oo keliya, waalidku carruurtooda oo keliya
- **Edge Functions:** Dib u eegista qorshaha casharka AI waxay ku shaqeysaa edge

function

ROUTING-KA CLIENT-SIDE

App-ku wuxuu isticmaalaa **switch** fudud oo ku saabsan **currentPath** gudaha **App.tsx**. Door kastaa wuxuu leeyahay routes u gaar ah. Tani waa ula kac — app-ku waa ku yar yahay router-ka buuxa.

MAAMULKA XAALADDA (STATE)

Sababta React Query: Xaaladda server-ka (imtixaannada, ardayda, warbixinnada) waa la kaydiyaa (cache) oo dib baa loo soo cusboonaysiiyaa. Xaaladda maxalliga ah (UI toggles, form inputs) waxay ku sii jirtaa component state.

GO'AAMADA QAABAYNTA

HELITAANKA DOOR-KU-SALEYSAN (ROLE-BASED)

Door kastaa wuxuu leeyahay bogag u gaar ah. Component-ka **AppContent** wuxuu hubiyaa **session.role** oo soo saaraa routes-ka saxda ah.

QORSHAYAASHA CUTUBYADA (UNIT PLANS) HEER SARE AH

Qorshayaasha cutubyadu waxay siiyaan qaab heer sare ah oo manhaj ah oo ka sarreeya qorshayaasha casharrada:

Macallimiintu → Abuuraan Qorshe Cutub → Fasalka iyo Maadada
Macallimiintu → Abuuraan Qorshe Cashar → Ku xiraan Qorshaha Cutubka
Macallimiintu → Gudbiyaan Qorshaha Casharka → AI wuxuu fahmaa macna
Kormeerayaashu → Dib u eega Qorshaha Cutubka → iyo Qorshaha Casharka

Cutub kastaa wuxuu leeyahay: magac, fasalka, maadada, xilliga, usbuuca bilowga/dhamaadka, iyo ujeedooyin. Qorshe kasta oo cashar ah ayaa xiri karaa hal cutub.

IMTIXAANNADA TAHAY XARUNTA

Wax walba waxay ku wareegaan imtixaannada:

```
Ardayda → Qaadaan Imtixaanno → Maaddiiba → Bishii → Fasalka
Macallimiintu → Geliyaan Imtixaanno → Fasalladooda
Kormeerayaashu → Xaqiijiyaan Imtixaanno → Kahor waalidka
Waalidku → Daawatadaan Imtixaanno → Warbixinnada
```

FAYL KELIYA OO LA TAAGEERO

Pluginka **vite-plugin-singlefile** wuxuu JavaScript, CSS, iyo assets oo dhan ku daraa hal fayl oo HTML ah.

ISBARBARDHIG

Waxa la helay: - Taageero fudud (hal fayl HTML) - Horumarineed degdeg ah (Vite HMR) - Badqabka TypeScript - Nabadgelyo (Supabase RLS)

Waxa la waayay: - Server-side rendering (SEO looguma baahna app-ka dugsiyada) - Qaybinta koodhka - Routing-ka URL-ku-saleysan - Offline-first

HABABKA LA TIXGELIYAY

Next.js: Waxay ku dari lahayd SSR iyo routing, laakiin hal fayl oo HTML ah wuxuu khilaafayaa qaabka Next.js.

Firestore: Waxay la mid tahay Supabase laakiin SQL ahaan kuma habboona.

Custom backend: Xakame dheeri ah laakiin dayactir dheeri ah. Supabase waxay maamushaa auth, database, iyo edge functions.

—# Qaabka Xogta

Sababta database-ka loo qaabeeyay sidaan, iyo sida qaybuhu isugu xirmaan.

DHIBAATADA

Nidaamka maamulka dugsiyada wuxuu u baahan yahay inuu raad raaco: -

Isticmaalayaasha (admin, macallin, waalid, kormeere) - Ardayda iyo diiwaangelinta fasalka - Natiijooyinka imtixaanka (maado, bil, nooc) - Taariikhda dugsiyada (sannado, xilliyo, bilo) - Qoondaynta (macallin bariyo fasalka-maadada) - Warbixinnada (xogta imtixaanka oo la isu geeyay)

Dhibaataadu waxay tahay: qaybahan waxay leeyihiin xiriir adag, habka helitaankuna wuu kala duwan yahay door kasta.

HABKA

XIRIIRKA QAYBAHA MUHIIMKA AH

```
profiles (isticmaalayaasha)
  |-- students (hal profile → arday badan via parentId)
  |-- exams (hal macallin → imtixaan badan via teacherId)
  |-- class_subjects (hal macallin → qoondayn badan)
  |-- unit_plans (hal macallin → qorsheyaal cutub badan via teacher
  |-- auth_id → auth.users (Supabase auth)

students
  |-- exams (hal arday → imtixaan badan)
  |-- attendance (hal arday → diiwaan badan)
  |-- parentId → profiles (xiriirka waalidka)

class_subjects
  |-- className + subjectId → subjects
  |-- teacherId → profiles

unit_plans
  |-- subject_id → subjects
  |-- class_name → (text, denormalized)
  |-- term_id → terms
  |-- teacher_id → profiles
  |-- lesson_plans (hal cutub → qorsheyaal cashar badan via unit_id)
```

SABABTA PROFILES LOO ISTICMAALAY, EE MA AHA USERS

Table-ka **profiles** wuxuu kaydiyaa xogta isticmaalaha heerka barnaamijka.

auth.users wuxuu maamulaa authentication-ka. Waxay isugu xirmaan

auth_id:

```

auth.users (Supabase)      profiles (Application)
|-- id (UUID)              |-- id (TEXT)
|-- email                  |-- auth_id → auth.users.id
|-- password_hash          |-- name
                            |-- role
                            |-- assignedClasses
                            |-- assignedSubjects

```

Kala saaridaani waxay ka dhigan tahay: - Auth waxaa maamula Supabase (badqab, la dayactiro) - Xogta barnaamijku waa gacanteeda (qaab dabacsan) - **auth_id** wuxuu u oggolaanayaa soo celinta session-ka

QORSHAYAASHA CUTUBYADA (UNIT_PLANS)

Qorshaha cutubku wuxuu ka kooban yahay:

```

unit_plans
|-- id (TEXT PRIMARY KEY)
|-- name (magaca cutubka)
|-- subject_id → subjects
|-- class_name (fasalka)
|-- term_id → terms
|-- week_number_start (usbuuca bilowga)
|-- week_number_end (usbuuca dhamaadka)
|-- objectives (ujeedooyinka barashada)
|-- teacher_id → profiles
|-- created_at / updated_at

```

Qorshayaasha casharrada waxay ku xirmaan karaan cutub iyada oo la isticmaalayo **unit_id → unit_plans(id) ON DELETE SET NULL** . Haddii cutubka la tirtiro, qorshayaasha casharku way sii jiraan laakiin ma laha cutub.

Tan waxay u oggolaanaysaa AI-ga inuu fahmo macnaha guud markuu buundeevo

qorshaha casharka. Gaar ahaan, **Curriculum Alignment** wuxuu isbarbardhigaa casharrada usbuuca ujeedooyinka cutubka. Haddii cutubku doonayo “jajabka oo la barto” laakiin casharradu ku saabsan yihiin “dhufsashada,” AI-ga wuxuu u dhigayaa buundo hoose. Tani waxay ka dhigan tahay in AI-ga uu eegayo cutubka markuu xaqiijinayo qorshaha casharka.

SABABTA IMTIXAANNADU YIHIIN XARUNTA

Table-ka imtixaanku wuxuu isku xiraa wax walba:

```
exam
|-- studentId → students
|-- teacherId → profiles
|-- subject (text, denormalized)
|-- examType (CA, Homework, Classwork, Quiz, Midterm, Final)
|-- month (text)
|-- status (pending → approved/rejected)
|-- termId → terms (optional)
```

status wuxuu abuuraa hawl: macallimiintu geliyaan → kormeerayaashu ansixiyaan → waalidku arkaan. Laba tallaabo oo kala ah ayaa hubiya tayada xogta.

SABABTA CLASS_SUBJECTS U JIRTO

Macallimiintu ma bariyaan “Mathematics” oo keliya — waxay bariyaan “Mathematics fasalka Grade 5-A”. Table-ka **class_subjects** wuxuu qabtaa tan:

```
class_subjects
|-- className: "Grade 5-A"
|-- subjectId → subjects
|-- teacherId → profiles
```

Tani waxay u oggolaanaysaa: - Macallimiintu waxay arkaan fasalladooda oo keliya -

Kormeerayaashu waxay la socon karaan iskudhafka fasalka-maadada -
Warbixinnadu waxay isu geeyaan fasalka-maadada

RLS POLICIES

Row-Level Security waxay hubisaa in door kastaa arko waxa uu arki karo oo keliya:

```
Macallin: WHERE teacherId = auth.uid()
→ wuxuu arki karaa imtixaannadiisa oo keliya

Waalid: WHERE parentId = auth.uid()
→ wuxuu arki karaa imtixaannada carruurtiisa oo keliya

Arday: WHERE studentId = auth.uid()
→ wuxuu arki karaa imtixaannadiisa oo keliya
```

Kormeerayaashu RLS ma qabso — waxay u baahan yihiin inay arkaan xogta oo dhan xaqiijinta.

Unit_plans RLS: - Admin: ALL (CRUD oo dhan) - Macallin: ALL laakiin `teacher_id = auth.uid()` (wuxuu arkaa oo keliya kuwiisa) - Kormeere: SELECT oo keliya (wuxuu arkaa dhamaan)

ISBARBARDHIG

Subject-ka denormalized: Table-ka `exams` wuxuu kaydiyaa `subject` qoraal ahaan, ma aha foreign key. Tani waxay nuqul ka dhigtaa xogta laakiin waxay fududaysaa queries.

TEXT IDs: App-ku wuxuu isticmaalaa TEXT astaamaha koowaad (nanoid). UUIDs waa heer caadi ah laakiin TEXT waa ka fudud yahay.

Xiriirka xilligu waa ikhtiyaar: Imtixaannadu way jiri karaan la'aanteed `termId`. Tani

waxay siisaa dabacsanaan laakiin waxay ka dhigan tahay in warbixinnadu ay maamulaan imtixaannada aan xiriirka lahayn.

HABABKA LA TIXGELIYAY

Subject-normalized (Iska caadiyey): Isticmaalka `subjectId` oo foreign key ah imtixaannada wuxuu ka hortagi lahaa qaladaad laakiin wuxuu ku dari lahaa JOIN su'aal kasta oo imtixaan ah. Habka denormalized ayaa loo doortay fududaynta queries.

Exam_types table gaar ah: Table gooni ah ama enum wuxuu noqon lahaa mid normalized badan laakiin noocyadu waa go'an yihiin oo yar yihiin — enum ku filan ayaa ku filan.

Soft deletes: Ku darista `deletedAt` timestamp wuxuu u oggolaan lahaa soo celinta laakiin wuxuu ku dari lahaa kakanaanta. Habka hadda wuxuu isticmaalaa hard deletes leh CASCADE.
